FIELD VISIT REPORT

Field location	***Nalban Bheri***
Agenda	***Orientation & Familiarizing with methods and surroundings.***
Project	***Study to preserve environmental & ecological balance of flora & fauna.***
Date	***3rd August, 2025 (Sunday)***
Visited by	***Sivansh Gupta, Anupam Pal***
Report drafted by	***Sivansh Gupta***

Objective of the visit:	• ***Orientation & Familiarizing with methods and surroundings.***
Output of the visit:	• ***Familiarized myself with the location and methods of data collection.***
Methodology/activity tools used	***Visual Approach (Visually spotting different species.)***

Visit Summary: The field visit was mainly focused on understanding ecosystem services & interrelation between the floral & faunal communities at East Kolkata Wetlands.

We arrived at the location around 8:30 a.m. and gained an understanding of the methodology for collecting bird data, including the various points from which data would be collected. I have also understood the ecosystem services and learnt about the different plants and birds found there and their importance in the wetland. But progress was halted because of a short burst of heavy rain. We departed at 10:00 am. Before departing, we also observed a few species like Indian Pond Heron, Little Cormorant, etc.
